

ULTIMATE JAVASCRIPT ARRAYS

With Daniel Stern, Code Whisperer

TOPICS WE'LL BE COVERING

- Basic Array Technique (Adding, Removing, Swapping Elements)
- Every built-in array operator
- Sorting Arrays
- Reducing Arrays
- Mapping Arrays
- All ES6 Functionality

WHO IS THIS COURSE FOR?

- Beginner student with very basic knowledge of JavaScript
- Programmer coming from different coding language who wishes to learn JavaScript
- Intermediate JavaScript Developers looking to take their knowledge of arrays to the next level (Just skip the chapter on Basic Technique)
- Front-end developers of every kind
- Back-end developers working with Node

BEFORE BEGINNING

- All demonstrations can be done inside Google Chrome or in a text editor, using Node.JS (Both options will be demonstrated)
- Having NodeJS installed is recommended but not required
- Try to set aside time where you can do the examples
- Recommended text editors: Sublime Text, Brackets, Atom, Chrome Dev Tools
- For clean dev environment, go to URL *about:blank* in Chrome
